PROFESSIONAL SUMMARY

Highly experienced Full Stack Java Developer with 4+ years of expertise designing, developing, and deploying scalable Java web-based applications. Deep proficiency in Microservices architecture using Spring Boot with design patterns including circuit breaker, distributed transaction management, and service discovery. Strong frontend experience with Angular, TypeScript, and modern CSS frameworks. Adept in cloud technologies (AWS), containerization with Docker/Kubernetes, and DevOps practices with Jenkins CI/CD. Committed to code quality using JUnit, Mockito, Selenium, and monitoring platforms such as Splunk, Grafana, and Dynatrace.

TECHNICAL SKILLS

Languages	Java 8/11/17, JavaScript, TypeScript, Python, SQL/PLSQL
Frameworks	Spring Boot, Spring MVC, Spring Security, Spring JPA, Spring Batch, Spring WebFlux, Hibernate, Angular, Kafka, JDBC, JMS
Web Technologies	JSP, JSTL, Bootstrap, jQuery, HTML5, SCSS, JSON, AJAX, SOAP, REST, JAX-WS, JAX-RS, Microservices, AWS
Databases	SQL Server, DB2, Oracle, MongoDB, PostgreSQL
App Servers	Apache Tomcat, JBoss, WebLogic, WebSphere
Logging & Monitoring	Log4J, SLF4J, Splunk, Grafana, Prometheus, New Relic
XML	XML, XSL, XSLT, DTD, XML Schema, SAX, DOM
Cloud (AWS)	EC2, S3, Lambda, RDS, SQS, SNS, IAM, CloudFormation, Route 53, DynamoDB
Operating Systems	Windows, Linux, Mac OS
Build & Test Tools	Gradle, Maven, Jenkins, Git, Bitbucket, GitHub, JUnit, Mockito, TestNG, Cucumber, Selenium

PROFESSIONAL EXPERIENCE

Software Developer III | **US Bank** | Atlanta, GA (Remote)

Nov 2024 – Present

- Developed applications using **Agile** methodology; participated in daily scrum, sprint planning, demos, and retrospectives.
- Leveraged **Java 17** features including lambda expressions, Stream API, method references, parallel collections, and enhanced concurrency throughout the application.
- Used the full **Spring Framework** stack: Spring Core/IOC, Spring Batch, Spring Boot, Spring Security, Spring ORM, and Spring AOP.
- Built **Spring Boot Actuator**-monitored microservices with Spring MVC architecture; implemented auth using **Spring Security and OAuth2**.
- Developed **Gradle-built microservices** using Spring Boot and JDK 11 that read and publish data to message brokers (Queues) and **AWS Kinesis**.
- Created **SOAP and RESTful web services** with WSDL, JAX-WS, CXF, and JAX-RS; built RESTful APIs delivering XML/JSON via Jersey.
- Configured **AWS** resources including S3, VPC, EC2, EBS, Security Groups, ECS, SNS, Auto Scaling, and RDS via CloudFormation and CLI.

- › Set up **CloudWatch** monitors, alarms, and notifications for EC2 instances; used Elastic Load Balancers and Route 53 for DNS management.
- › Migrated on-premise Java applications to **AWS cloud**; deployed microservices via EC2 and Elastic Beanstalk/CodeCommit.
- › Implemented **Kafka** message routing and broker in Node.js; synchronized load balancing between microservices and connection pools.
- › Deployed **Spring Boot microservices** in Docker containers via AWS admin console; built and deployed **GitLab CI/CD** pipelines with Docker.
- › Used **Maven/Nexus** for build and dependency management; integrated with GitLab and Jenkins for CI/CD and code quality (Sonar).
- › Wrote **HQL (Hibernate)** queries for CRUD operations with Oracle database; wrote PL/SQL stored procedures for complex DB operations.
- › Tracked issues and work assignments with **Jira**; ensured code accuracy with JUnit and logging with **Log4j 2**.

Sr. Backend Engineer | American Airlines | Fort Worth, TX

March 2023 – Oct 2024

- › Designed and developed applications in **Java** with modern Java 11/17 features: lambda expressions, Stream API, and method references.
- › Built and maintained **REST microservices with Spring Boot**; used Spring AOP and Actuator for metrics and persistence layers.
- › Refactored **legacy monolithic Java** codebases to modular microservices, preserving business logic while improving performance.
- › Developed responsive UI components with **Angular Material, Tailwind CSS, and SCSS**; built SPA with Angular 12/13 and TypeScript.
- › Wrote unit and component tests using **Jasmine, Karma, Spectator, and Jest**, achieving 85%+ code coverage in critical modules.
- › Integrated backend **REST APIs and GraphQL** endpoints with Angular using Apollo Client and HttpClient with TypeScript generics.
- › Implemented **GitOps-based** deployments with **OpenShift**, enabling seamless rollout/rollback with audit traceability.
- › Managed **OpenShift** resource limits, liveness/readiness probes, and auto-scaling; enforced SCC and RBAC security policies.
- › Monitored performance with **Prometheus, Grafana, and OpenShift Monitoring**; implemented real-time alerting and visibility.
- › Developed **serverless functions with AWS Lambda** for data processing and workflow automation, reducing compute costs significantly.
- › Built CI/CD pipelines with **AWS CodePipeline, CodeBuild, and CodeDeploy** using blue-green deployment strategies.
- › Implemented **Amazon ElastiCache (Redis)** for caching frequently accessed data, reducing database load and improving latency.
- › Managed static assets in **Amazon S3** with lifecycle rules for archival and cost efficiency; used Bitbucket and Git with Gradle builds.
- › Designed role-based **UI components** with TypeScript and JWT; collaborated with backend teams using TypeScript interfaces and **OpenAPI** specs.
- › Designed **REST microservices** with Spring Boot, Spring Data JPA; documented APIs with **Swagger**; applied TDD throughout.

EDUCATION

Bachelor of Science in Computer Science

Youngstown State University | Youngstown, OH
